

Enclosed you will find a copy of the Lead Based Paint Inspection Report for your property. It has been determined that the residential premises has lead paint hazards present. As the owner of this property, you are required by M.G.L.c 111,s197 to abate and/or contain those surfaces determined to be dangerous whenever a child under the age of six (6) resides in the unit. The inspector is required to submit a copy of this report and various notification to the tenants of this dwelling unit, and page one to the Director of the State Program (CLPPP). Please read all of the attached documents from the state.

A combination of test methods may have been used to perform the inspection. An X ray Florescence Analyzer (XRF) and a 6-8 % solution of Sodium Sulfide. A reading equal to or greater than 1.0 mg/cm2 on the report or a "Pos" indicates a dangerous level of lead as defined by the Massachusetts Lead Law. Please note that no testing method is perfect, any surface indicated as "Neg" or below 1.0 mg/cm2, may contain some lead. Therefore it is my opinion that you should never remove the paint from these surfaces by any method which creates dust.

If any common areas were found to contain dangerous levels of lead paint, you are required to distribute copies of the enclosed "Notice to Tenants of Lead Paint Hazards" to all other occupants of the building.

**All deleading work done to bring this property into compliance must be done by an authorized individual.**

Massachusetts regulations defines three levels of deleading activity. Please call 1-800-532-9571 for more information on this. The three levels of deleading are:

1. Low Risk Deleading and Encapsulation- Owner/agent sends for information from CLPPP, passes a quiz and is given an authorization number.
2. Moderate Risk Deleading- Owner/agent takes an 8 hour training by an approved training provider and passes a state administered test, and is given an authorization number.
3. High Risk Deleading- Can only be done by a MA licensed Deleading Contractor.

***J&M Inspections is an approved training provider for moderate risk deleading, please call for training dates and locations.***

Abatement work can only begin after a ten (10) day notice has been given by the trained property owner and/or the deleading contractor to all required parties. If you do low or moderate risk deleading you must give the inspector copies of all required forms and documentation. Residential premises qualify for the Massachusetts Lead Paint Tax Credit. The amount of the credit is equal to the cost of abatement or \$1,500, whichever is less for each unit delead.

**Before a "Letter of Full Deleading Compliance" is issued dust samples must be taken in all units where deleading work (including common areas and exteriors) has been performed** These samples are sent to a lab for testing. Due to the cost of laboratory analysis, equipment and materials, shipping and handling, an additional charge to the property owner will be billed. Once dust samples pass, a "Letter of Full Deleading Compliance" will be issued. This letter will also include any tax credits allowed for the unit. All "Letters of Compliance" will be issued upon receipt of payment in full for all services rendered.

Please call this office if you have any questions concerning the above information. We will assist you any way we can. *And again Thank You for using J&M INSPECTIONS.*

Sincerely,

James Montemagni

## **NOTICE TO PROPERTY OWNERS AND TENANTS:** **TENANT'S RIGHTS AND RESPONSIBILITIES**

### **Violations**

Lead paint violations under the Lead Law and the state Sanitary Code have been found in the home or apartment listed in the attached documents. These violations may be a danger to the health of the people living in the home or apartment. Children younger than six years old are at the most risk of being lead poisoned. Lead can damage a child's growing brain and other parts of the body. Even small amounts of lead can harm a child.

The owner of this home or apartment is responsible for removing or covering the lead violations. (This is called deleading.)

### **Legal Rights and Responsibilities**

For these lead violations to be deleaded as quickly and safely as possible, it helps if both the owner and the tenant cooperate with each other. It is important that tenants and owners know their rights under state law. Because the laws are not simple, tenants may need to get legal help and/or legal advice before trying to use the rights found below.

- (1) **Temporary Housing.** (Massachusetts General Laws chapter 111, section 197)  
Tenants and their pets **must** be temporarily moved out of the home or apartment for the whole time that high-risk or moderate-risk deleading work is taking place inside the home or apartment. They cannot return until that work is done, the unit is cleaned up and a licensed lead inspector finds that the home or apartment is safe.

The owner and tenants have to agree on a plan for temporary housing. If the tenants choose to move in with family or friends they do not have to pay rent to their landlord while they are out of their home. If they do not so choose, the owner finds the temporary housing and offers it to the tenant. The Law requires that owners pay any charges for the temporary housing the owner offers, and that tenants continue to pay their full normal rent during the time they live in the temporary housing. The temporary housing must be one that "does not cause undue economic or personal hardship to the tenant." If the temporary housing chosen by the owner would not cause a hardship, and the tenant still refuses to accept it, then the tenant has to find and arrange for his or her own temporary

housing during deleading. In this case, the tenant doesn't have to pay rent for the days he or she is not at home, but has to pay the cost of the temporary housing he or she has chosen. In this case, the owner has to pay the tenant any amount by which the cost of the temporary housing first chosen by the owner is more than the rent for that period. No matter where the tenant stays, the owner must pay reasonable moving costs. Tenants are advised to get legal help if they can not agree with the owner on a plan.

(2) Protection from Retaliatory Rent Increase or Eviction.

A property owner may not evict a tenant, or increase the rent or refuse to renew the lease of a tenant in retaliation (getting even) for the tenant reporting a suspected lead paint violation to a code enforcement agency such as the local board of health. If the rent is raised, or tenants get an eviction notice or their lease is not renewed within six months after the tenants called the board of health or got their home delead, a court can automatically find that the owner took this action in retaliation **unless** the owner can show clear evidence that he or she had other reasons, unrelated to the violations. **An eviction based on not paying the rent is not retaliatory.** Property owners who are found to have threatened or taken actions against tenants for exercising rights under the Lead Law are liable for damages under M.G.L. c. 186, s. 18 and M.G.L. c. 93A.

A tenant who believes that the owner has retaliated against him or her because of lead violations may also file a complaint with the Massachusetts Commission Against Discrimination (MCAD).

(3) Rent Withholding. (Massachusetts General Laws chapter 239, section 8A)

Tenants have a basic obligation to pay rent for their home or apartment to the owner. But, if lead violations are not being delead, tenants may have a right to hold back their rent payments. Tenants may take this step **only** if they were up to date in their rent at the time the owner was notified of the lead paint violations, and they did not begin withholding until this point. Owners have the right to go to court to evict tenants for not paying rent. To fully protect themselves against attempted evictions, tenants withholding rent for Lead Law violations may need to place withheld rent money in an escrow (separate savings) account, or may be ordered to do so by the court. If these conditions are met, tenants may not be evicted for not paying rent or for any other violation that is not the tenants' fault.

Owners have the right to enter the tenants' home or apartment, if possible by appointment, but in any case in emergencies, to inspect for lead violations and to have them repaired. Tenants have a responsibility to cooperate with owners and allow all necessary access to their home or apartment for repairs. Tenants who do not cooperate with this right of entry may be subject to eviction. If rent was withheld, the court may order that all or part of the withheld rent be paid to the owner after the violations are delead.

(4) Abatement of Rent or Damages. Even when the rent withholding statute does not apply, tenants may be able to have their rent reduced or get back rent they have already paid, if their home or apartment has Lead Law violations. The landlord always has a duty to provide housing that meets basic housing standards. A tenant can bring a court action for breach of this "implied warranty".

(5) "Rent Receivership". (Massachusetts General Laws, chapter 111, sections 127C - 127J)

This law allows tenants, the state Childhood Lead Poisoning Prevention Program or the local board of health to ask the court to find that Lead Law violations exist, and to allow rent to be paid into court rather than to the owner, to pay for necessary repairs.

(6) Owner Liability: Compensatory and Punitive Damages. (Massachusetts General Laws chapter 111, section 199)

The owner of a home or apartment built before 1978 is liable for damages to a child under age six who becomes lead poisoned as a result of the owner's failure to comply with the Lead Law and regulations. The owner of such home or apartment who is notified through an Order to Correct Violations or Order to Restore Interim Control Measures of lead violations, and who willfully fails to correct the violations, in accordance with the Lead Law and Regulations, is also subject to punitive damages, which are triple the actual damages found.

**NOTE:** All the information presented above is only a summary of the law. Before you decide to withhold your rent or take any other legal action, it is advisable that you consult an attorney. If you can not afford to consult an attorney, you should contact the nearest Legal Services office.

### **Repainting**

Violations of the Lead Law are also violations of the state Sanitary Code. Surfaces from which lead paint or other coatings have been removed have to be repainted under 105 CMR 410.020 of the state Sanitary Code. Delead surfaces have to be sealed and made easy to clean. Delead surfaces can only be repainted **after** the surfaces have been reinspected while bare and approved by a licensed lead inspector.

Tenants may want to contact the owner if the required repainting is not done. If the owner does not respond, tenants should call the local board of health.

**RESIDENTIAL DELEADING ADVISORY**

The process of removing or covering lead paint hazards, commonly called deleading, can be dangerous if it is not done properly. That's why the Lead Law (Massachusetts General Laws chapter 111, sections 189A through 199B), the Regulations for Lead Poisoning Prevention and Control (105 Code of Massachusetts Regulations 460.000) and the Deleading Regulations (454 CMR 22.00) have rules for how deleading is done in homes and apartments. These rules say who can do the work, safety steps that have to be taken while the work is done, how to clean up after the work and how the work is finally approved. These rules are enforced by the Department of Public Health's Childhood Lead Poisoning Prevention Program (CLPPP), the Division of Occupational Safety (DOS) and local boards of health.

**Who can do deleading work**

Under these laws, only a licensed deleading contractor can do high-risk work, such as scraping or stripping lead paint, repairing more than a small amount of chipping or peeling lead paint so it can be repainted, and demolishing lead-painted building parts. Besides deleadors, property owners and their agents who take a one-day course can do moderate-risk deleading work, such as removing windows, woodwork, and just about any surface of a house, as well as repairing small amounts of chipping and peeling lead paint so it can be repainted. Lead-safe renovators trained and licensed by DOS may also be hired to do moderate-risk deleading work. Finally, low-risk deleading work can be done by all the people who can do high- or moderate-risk deleading work, and also owners and their agents, including contractors, who just complete the CLPPP low-risk booklet (and/or encapsulant booklet). Low-risk deleading means covering surfaces, applying encapsulants, capping baseboards, removing doors, cabinet doors and shutters, and applying exterior siding. Property owners and their agents may also do structural repairs and lead-dust cleaning for interim control.

**Staying out of the home or parts of the home during deleading**

To protect the people who live in the home or apartment being delead, the law also has rules about making sure they stay out of the home or apartment, or the area being worked on, in these ways:

- All people and pets have to be temporarily moved from the home or apartment for the whole time that high- or moderate-risk deleading work is taking place inside the home or apartment. The owner has to provide residents with a reasonable alternative place to live for this time. Property owners and residents should refer to the CLPPP document, "Notice to Property Owners and Tenants: Tenants' Rights, Responsibilities, and Remedies" for more information on alternative housing during deleading.
- People and pets have to stay out of the work area while most low-risk deleading work,

structural repairs or cleaning of lead dust, is taking place. They also have to stay out of the work area when deleading work of any kind is taking place in common areas outside the home or apartment, as long as they have another regular way (not a fire escape) to go in and out of the building. In these cases, people and pets can use the area once cleanup is completed after all the work in the area is done.

- People and pets have to stay out of the home or apartment for the day during application of encapsulants with an airless sprayer. They also have to stay out for the day during deleading of common areas when they do not have another regular way to go in and out of the building. When people and pets are out of their home or apartment for the day, it means they can come back to the home or apartment after cleanup at the end of the workday, and don't have to be out overnight.

It is very important that people whose home or apartment is being deleading think carefully about what they will need during the time they are away from home, and take it with them. No one can return to a home or apartment while deleading that requires them to be out is still taking place, and has not been properly cleaned up. Property owners and residents must take deleading safety rules seriously and cooperate fully to make sure everyone is protected. No one should interfere with the work being done safely.

### **Getting ready for deleading to begin**

People who live in a home or apartment in which any kind of deleading work is going to be taking place have to get written notice at least 10 days before the start of this work. This applies also to other residents of a building, if any deleading work will take place in common areas. Before deleading work begins, all household possessions of every type should be removed or stored in plastic bags in non-work areas. Closets and cabinets to be deleading must be emptied. As a last resort, large furniture and belongings not removed from the work area should be put in plastic bags and left in the center of the room, where they will be covered with heavy plastic by the person doing the deleading. The reason for this is to protect everything in the home or apartment from lead dust contamination. Belongings must also be protected before an owner or agent performs low-risk deleading work, or other work that may be required for interim control, but the precautions are not as extensive for this type of work. In general, it is recommended that furniture and belongings be moved outside the work area, or covered with thick plastic and sealed with duct tape, before low-risk deleading begins.

### **Cleanup after deleading and returning home**

A final cleanup will be done at least two hours after all the interior high- or moderate-risk deleading work is done. This delay is to make sure that fine lead dust will settle out of the air and be removed in the final cleanup. People and pets who were temporarily moved to alternative housing can return only after a lead inspector or risk assessor says that the home is safe. The inspector decides this after doing a reoccupancy reinspection, which includes an analysis of lead dust levels within the home. Residents should leave a phone number where they can be reached so that the inspector or risk assessor can call them and let them know when it is safe to return home. If the property owner or agent is going to be doing low-risk deleading work or other work for interim control after the residents return home, they will be taking some safety steps for this, as described in the CLPPP low-risk booklet. They will also be doing a cleanup when they are done with the low-risk work. An inspector or risk assessor will return at the completion of all the work and do a reinspection to check the owner's or agent's work.

### **Temporary ways to protect children from lead poisoning**

Children exposed to lead paint hazards are at risk of becoming lead poisoned. This disease can affect every part of a young child's developing body, and in particular, can seriously and permanently hurt the brain, kidneys and nervous system. Even at lower levels of exposure, lead can cause children to have learning and behavioral problems.

The best and only permanent way to protect children from lead poisoning is deleading. But even before that process begins, there are some important steps that can be taken to protect young children from lead poisoning. Your lead inspector's or risk assessor's advice should be carefully followed because he or she knows your child's home.

As part of their normal behavior, young children place things in their mouths, especially toys and their own fingers. If there are lead paint chips and dust in your home, they may be picked up by your child's fingers, as well as by toys, foods and pacifiers that fall on the floor, and end up in your child's mouth. It is especially important to wash your child's toys and to keep your child's hands clean, particularly before meals and at bedtime.

Areas of peeling or chipping lead paint and dust should be cleaned. Wet wiping with paper towels and a general household detergent is best. Do not use your household vacuum cleaner to clean up paint chips, because this will only send fine lead dust into the air. Windows, windowsills and the floors under windows in particular are often areas from which children can get exposed to lead. Sills should be cleaned regularly if paint dust or flakes collect there. If windows are in poor condition, the best thing to do may be to keep the lower sash closed and open only the upper sash for ventilation. (This also protects your child from accidentally falling from the window.) Contact paper may be applied to areas of peeling paint on windowsills, walls or other surfaces as a temporary measure.

Sometimes furniture can be moved to block children from deteriorating paint or plaster. If deteriorating paint or plaster is in the child's bedroom, use another room as the child's room, if possible. Think of those parts of the home where your child spends most of his or her time, and try to keep them as clean as you can before your home is delead.

Lead paint can also get into soil. If the outside of your home has chipping or peeling paint, do not let your child play in the soil closest to the house. Be careful to wipe your shoes off on a mat before walking into your house, so you don't track in soil from these areas. Follow the advice of your lead inspector or risk assessor about soil on the property.

For more information about how the deleading process works, and how to protect your children from lead poisoning, call the toll-free CLPPP information line, at 1(800) 532-9571.

## NOTICE TO TENANTS OF LEAD PAINT HAZARDS

Lead in violation of the Lead Law (Massachusetts General Laws, chapter 111, sections 189A-199B) and the state Department of Public Health's Regulations for Lead Poisoning Prevention and Control (105 Code of Massachusetts Regulations 460.000) has been found in apartment \_\_\_\_\_, in this building. Children exposed to lead hazards are at risk of becoming lead poisoned. This disease can affect all parts of a young child's developing body, and in particular, can seriously and permanently hurt the brain, kidneys and nervous system. Even at lower levels of exposure, lead can cause children to have learning and behavioral problems.

If you have a child under six years of age, it is important that he or she be regularly tested for lead poisoning, as the law requires. If your child has not been tested recently, you should ask your child's doctor or health care provider to test him or her. If you don't have a regular health care provider, you can call your local board of health, or the state Childhood Lead Poisoning Prevention Program (CLPPP), at 1-800-532-9571, to find out where you can get your child tested for lead for free. Lead poisoning can only be detected by such testing.

Since lead violations have been found in an apartment in this building, it is quite possible that your unit may have lead violations too. If you have a child under six years of age, you should ask the owner of your building about having your apartment inspected for lead paint. You can call your local board of health to check for lead (ask for a lead determination), or call CLPPP at 1-800-532-9571 for further advice. It is against state law for property owners to discriminate against tenants with children because of lead paint hazards in their apartment.

If deleading of apartment \_\_\_\_\_ will also include deleading of common hallways, staircases and porches of your building, you will get a written notice 10 days before any deleading will begin. While the deleading is being done, everyone must keep out of the areas being worked on. You have to use another way to go in and out of your building during this time. If your apartment is on the same floor and is in the work area as a common area in which deleading is being done, the person or persons doing the deleading work will protect your apartment too. They will be temporarily covering your doorway with thick plastic sheeting and taping it down with masking tape, so that fine lead dust can't be blown in, around, or under your door. If they have not properly covered areas to protect them from lead dust and debris from the deleading work, tell the owner of your building or call the state Division of Occupational Safety (DOS) at 1-800-425-0004, or CLPPP at 1-800-532-9571. If you don't have an alternative way of getting in

and out of your building, talk to the owner of your building, or the person or people doing the deleading, and coordinate the work.

Check your windowsills and doorways for any visible dust after deleading. Lead dust can be cleaned up with paper towels and a mixture of regular household detergent and water. If you notice lead dust from deleading in your apartment, tell the person doing the deleading, and the owner of your building.

Deleading work that is done the right way should not result in lead contamination of your building. However, if you notice any lead paint dust or debris that has not been properly cleaned up at the end of the workday, tell the owner of your building. You can also call DOS at 1-800-425-0004 or CLPPP at 1-800-532-9571 or the local health department.

**EXPLANATION OF LEAD INSPECTION REPORT FORM COLUMNS**

This document is intended to provide general information needed to understand the inspection report. However, you should always speak with the inspector if you have any questions before you delead your home.

<b>SIDE</b>	Refers to A,B,C, or D side of the building or room. See the diagram on the cover sheet. The "A" side of the building or room is the side facing the street which gives the property its address (usually, it is the front of the building). Keeping your back to this street, from the "A" side move clockwise to the "B" side on your left, the "C" side opposite you, and the "D" side to the right.
<b>SURFACE</b>	Refers to the building component(s) being tested. Generally, each separate component is considered one surface. Some surfaces may be made up of more than one part. For example, "Baseboard" may refer to four separate pieces of wood (one running along each wall), but is still considered one surface.
<b>LEAD</b>	<p>The actual lead result. Each surface tested must have a result recorded in the "Lead" column.</p> <ul style="list-style-type: none"> <li>• A number shows that the surface was tested with an XRF analyzer. A number (or average number) equal to or greater than 1.0 mg/cm<sup>2</sup> is a dangerous level of lead.</li> <li>• A "pos" or "neg" shows that the surface was tested with sodium sulfide. "Pos" means that there is a dangerous level of lead.</li> <li>• "N/A" means that the inspector was not able to test the surface. Unless the owner can get a sample to test, the inspector must assume the surface contains lead and require it to be delead, if necessary.</li> <li>• "Metal" means that a metal surface was not tested and only needs to be intact. If the surface is a metal handrail, metal window sill, or metal railing cap, it needs to be delead if it is equal to or greater than 1.0 mg/cm<sup>2</sup>, "pos," or is "N/A."</li> </ul>
<b>TYPE OF HAZARD</b>	<p>Not all lead paint must be delead. This column tells you IF and WHY a surface needs deleading.</p> <ul style="list-style-type: none"> <li>• "M/I" circled means that the surface is a moveable/impacted surface and must be delead in its entirety.</li> <li>• "A/M" circled means that the surface is "accessible mouthable" and must be delead to a minimum of five feet high, four inches in from the edge or corner.</li> <li>• "L" circled means that the surface is loose and must, at minimum, be made intact.</li> <li>• If more than one choice is circled, the rules for deleading may change depending upon what method of deleading you choose. Speak to the inspector for more information.</li> <li>• "N/A" means the inspector was unable to determine if the surface was loose or intact. The person doing the deleading must check this surface and follow all the rules for deleading. Speak to the inspector for more information.</li> <li>• If nothing is circled or marked "N/A" then it is likely the surface does not need deleading. Speak to the inspector for more information.</li> </ul>
<b>COMMENTS</b>	Any additional observations or test results made by the inspector that affect the inspection or deleading.
<b>DELEAD DATE</b>	The date that the lead inspector checks the surface and finds that it has been successfully delead and passes reinspection.
<b>DELEAD METHOD</b>	The kind of deleading done to bring a surface into compliance. Refer to Deleading codes in the Key on the cover page of the inspection report.
<b>MEASURE: LOOSE PAINT (IN "EXCLUDED SURFACES" BOX)</b>	The amount of loose paint on a surface as measured by the lead inspector. "N/A" means that the inspector was not able to measure the loose paint, but has determined that it is more than the cut-off. Surfaces listed here, whether with a measurement or with an "N/A" notation, can only be made intact by a licensed deleader. Note that there are still other low and moderate-risk deleading activities that may be done by someone who is not a licensed deleader.
